Art Unit: 3634

Applicant's election with traverse of group 1-figures 1-9 in Paper No. 8 is acknowledged. The traversal is on the ground(s) that it does not seem to be a "serious burden on the examiner" to review the pending claims. This is not found persuasive because the applicant has disclosed several embodiments that are not similar in design and would require a greater comprehensive search, which would be a burden on the Examiner.

The requirement is still deemed proper and is therefore made FINAL.

Claims 1-7, 9, 17, 20, 29, and 30 (applicant stated claims 39 in the response and not claim 30) currently read on the elected invention. Claims 8, 16, and 19 are hereby withdrawn.

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-7, 9, 17, 20, 29, and 30 are rejected under the judicially created doctrine of double patenting over claims 1-22 of U. S. Patent No. 6,360,487 since the claims, if allowed, would improperly extend the "right to exclude" already granted in the patent.

The subject matter claimed in the instant application is fully disclosed in the patent and is covered by the patent since the patent and the application are claiming common subject matter, as follows: a door having a resilient core, a flexible covering which covers the core, and an actuation system coupled to the door which moves the door between an open and closed position.

Furthermore, there is no apparent reason why applicant was prevented from presenting claims corresponding to those of the instant application during prosecution of the application, which matured into a patent. See *In re Schneller*, 397 F.2d 350, 158 USPQ 210 (CCPA 1968). See also MPEP § 804.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims, 1-7, 9, 17, 20, 29, and 30 are further rejected under 35 U.S.C. 103(a) as being unpatentable over Clark in view of Leuchten et al. Clark discloses two panels (C and D), an actuating system (chains, pulleys, motor, inclined guide track), which moves the panels (C and D) between an open and closed sealed position. Clark fails to disclose the panels to be formed of resilient foam having a covering. Leuchten et al. disclose an impact-absorbing panel formed of foam and having a flexible outer covering. It would have been obvious to one of ordinary skill in the art at the time of the invention to provide the panels of Clark to be impact absorbing as taught by Leuchten et al. since this allows the panels to be resilient upon an impact without damaging the panel itself.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. U.S. patents to Kern et al. ('763) and Newberg disclose elements similar to that of the applicant's invention.
